

Healthy Streets Sensors

Almere Technology - Sustainable Development Solutions

Newcastle — Urban People Counting

Machine Learning enabled footfall monitoring from rooftop positions overlooking Northumberland Street, one of Europe's busiest shopping streets. Baseline of people and traffic flows captured for city centre regeneration areas.

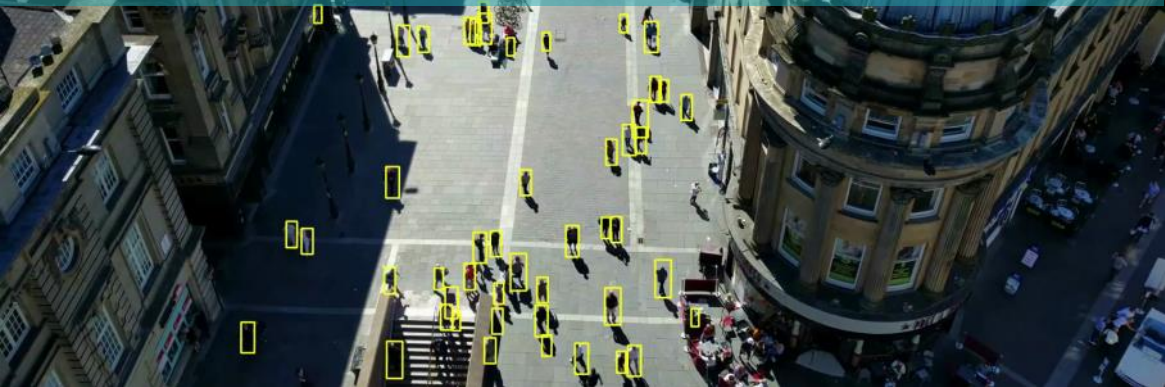

Sensors deployed both as standalone units and as a fog of connected units.

Fully maintained hardware compatible with wider urban camera network.

Client:  **Newcastle University**

 urban observatory

Connected Large Scale Crowd & Traffic Monitoring

Scalable solution deployed Summer 2018 across two sections of Newcastle's urban core.
